

Our Solutions for the Oil and Gas Industries

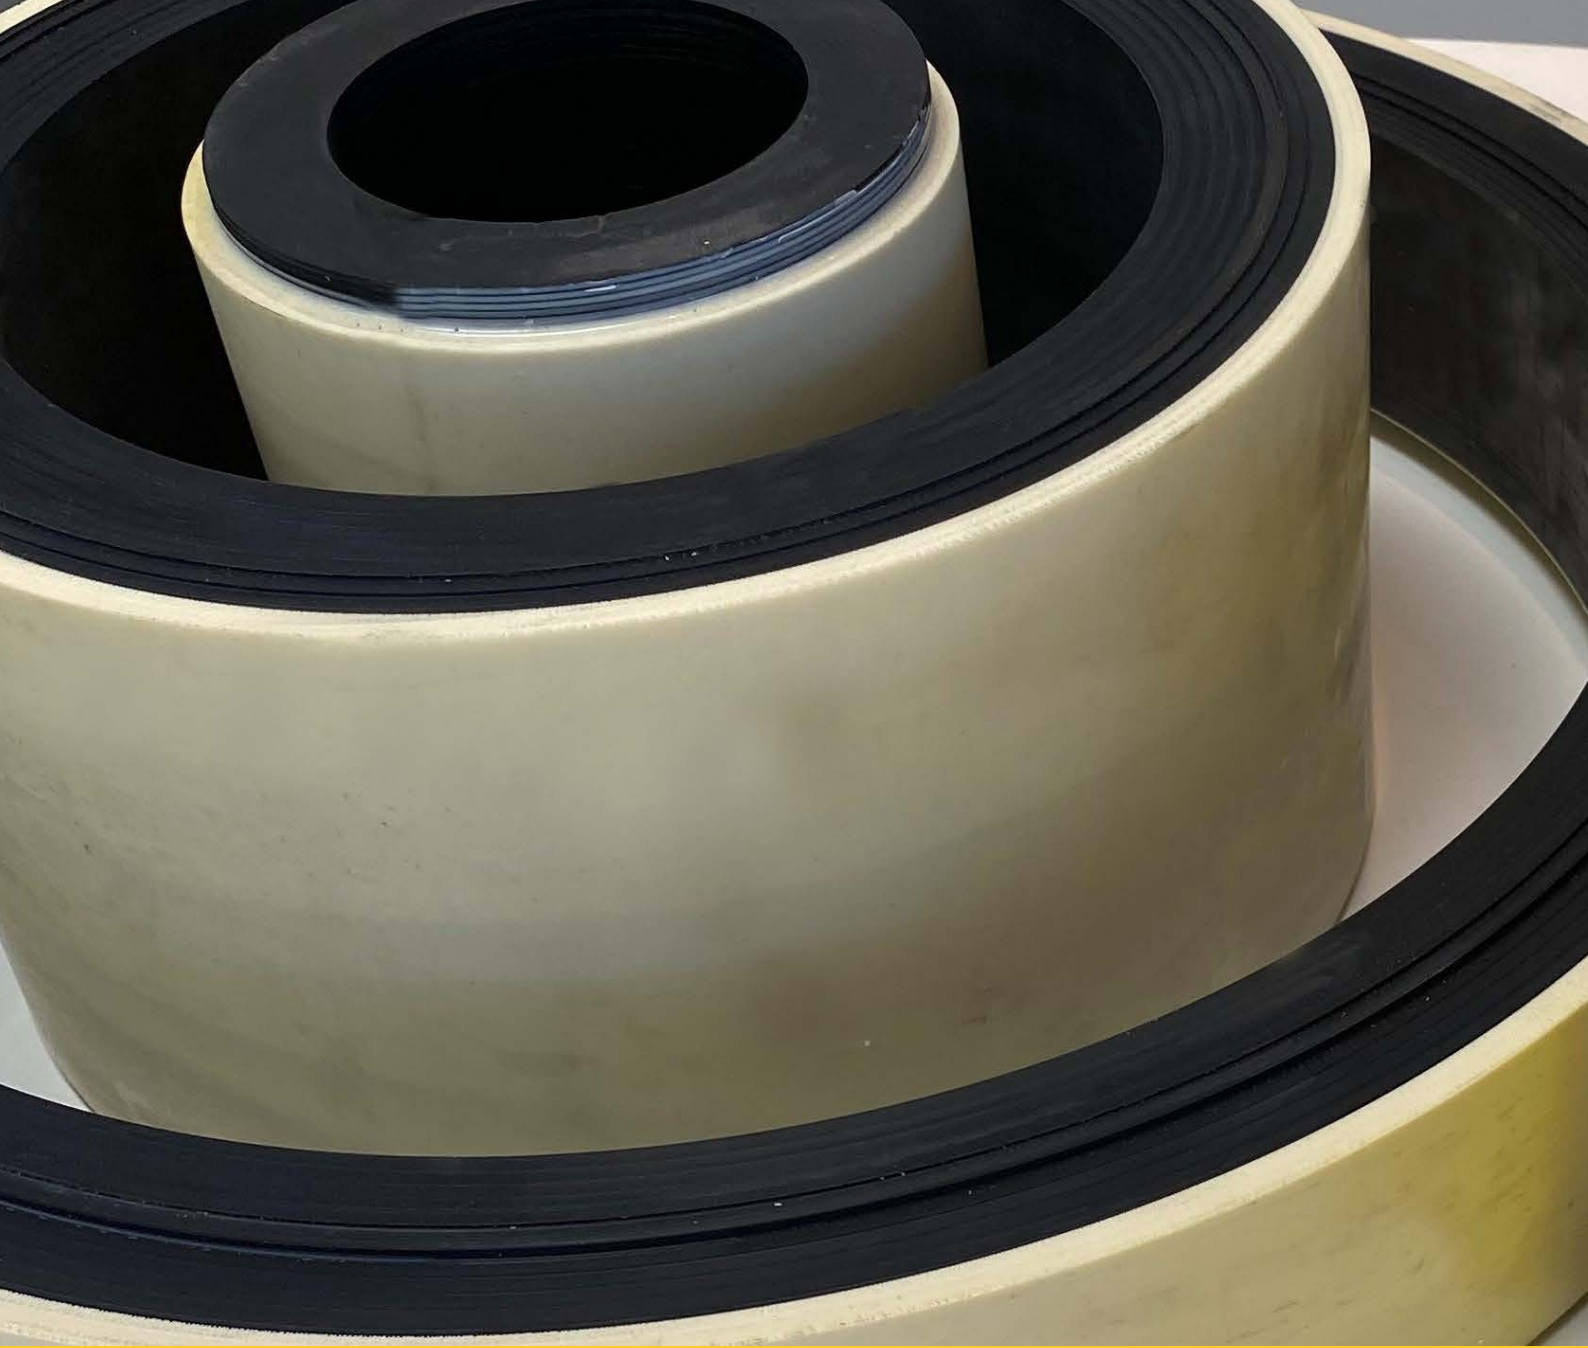

EPDM MATERIAL - AWC752

EPDM material is one of Chesterton Customseal's sealing materials and is perfect for the oil and gas industry.

With specialised properties that make it UV resistant, this material is the one to choose for any application or situation that includes high exposure to sunlight. The material can form machined O-rings, pneumatic seals, low-duty hydraulic seals, and combined seal energisers.

Available in 85A hardness, this material can be used throughout the oil and gas industry and will give you the best results every time, with no cracks or warping in direct sunlight!
